Education

National Institute of Technology, Jalandhar
Bachelor of Technology in Information Technology

Jalandhar, India
Aug 2023 – Aug 2027

Experience

Full Stack Intern — StudentVerse (Dubai)

Aug 2026 – Present

Product Engineering Intern — Remote

- Building responsive web/mobile screens and integrating APIs for student discovery.
- Deploying containerized services with Docker and managing scalable infrastructure on Microsoft Azure.

AI Research Intern — Molsys Pvt. Ltd.

Jun 2026 – Jul 2026

AI/ML Research Internship (Paid Contract Work) — Remote

- Built and fine-tuned LLM pipelines for SFT, distillation, and fast inference and Engineered agentic AI workflows.
- Deployed Qwen on 2x NVIDIA H200 GPUs using llama.cpp, Unsloth Studio, and vLLM.

Amazon ML Summer School 2026 — Selected Cohort Participant

Jun 2026 – Jul 2026

Amazon — Machine Learning Training Program

- Selected among 3,000 students from 134,000+ applicants across India and completed training in Generative AI and LLMs

Open Source Contributor

Mar 2026 – Present

Meta LLaMA & Google DeepMind Gemma

- Fixed tokenizer normalization and strict JAX typing issues in [Google DeepMind Gemma PR #624](#).
- Fixed a broken CLI import causing runtime download failures in [Meta LLaMA PR #476](#).

Full-Stack Web Developer Intern

Jun 2025 – Jul 2025

Skylark Express Delhi Pvt Ltd

On-site, Gurugram

- Built an internal logistics dashboard from scratch for package tracking and operations and redesigned frontend views.

Projects

AutonomousX: Built 25 LLMs From Scratch (0.1B–1.4B) on Google TPUs <https://huggingface.co/autonomousX>

- Built 25 open-source LLMs from 124M to 1.4B parameters under the **Google TRC grant**.
- Implemented JAX/Flax distributed training with **pmap** across TPU v4/v6e, testing 6 architectures, optimizers, positional encodings, and datasets over 500B+ tokens. Open-sourced model weights, checkpoints, training metrics, and Colab inference.

GiniVibe: Full-stack End-to-End Scalable Social Discovery Platform

<https://github.com/YADAV1825/Ginivibe-project>

- Built web/mobile social platform with multimedia feeds, encrypted chat, events, group audio/video and AI personas.
- Designed hybrid monolith/microservice backend.
- Built an intent-driven AI matcher for natural-language user discovery and ranking.

PathoPreter: Large-Scale Genomic Data Pipeline & DNA Foundation Model

<https://huggingface.co/autonomousX/PathoPreter-DNA-Pathogen-Clinvar_{nomAD} – ranker>

- Built a 32-core pipeline processing 7.7M raw genomic records into 1.25M leakage-free, GPU-ready variants, reducing preprocessing time from 150+ hours to under 20 hours.
- Fine-tuned a 500M-parameter Nucleotide Transformer on the curated variants to predict disease-causing rare genetic mutations.
- Achieved 0.9186 ROC-AUC and identified 75%+ harmful mutations while evaluating only 10% of variants; 80x smaller than EVO2.

RAGE-BORN: Agentic CLI Harness & Browser-Aware Agent

<https://github.com/YADAV1825/RAGE-BORN>

- Built an autonomous developer agent operating across terminal and browser through natural language.
- Orchestrated 25+ CLI tools, filesystem operations, and multi-model LLM APIs with planner-execution feedback.
- Automated browser navigation, forms, research, and Google Workspace synchronization.

Technical Skills

Programming: TypeScript, JavaScript, Python, C++, SQL

Development: React, Next.js, React Native, Node.js, Express.js, Tailwind CSS, WebSockets, WebRTC

AI & ML: PyTorch, JAX, Hugging Face, LLM Pretraining & Fine-tuning, GPU Clusters (A100/H100)

Cloud: AWS, GCP, Azure, Docker, CI/CD, Linux, Git

Databases: PostgreSQL, MongoDB, Prisma ORM

Achievements

Awarded Google TRC grant for 320 TPU access (SPOT + STANDARD VMs).

IOQM (PRMO): Qualified for Indian Olympiad Qualifier in Mathematics

[\[Certificate\]](#)

KVPY SA: AIR 2590

[\[Certificate\]](#)

LeetCode: Knight (2013), 600+ problems solved across all platforms

[\[Profile\]](#)

CodeChef: 4-Star (1818)

[\[Profile\]](#)

Codeforces: Specialist (1417)
